

How to Use Iris Scanner for Aadhaar Services

Aadhaar-enabled payment system plays a vital role in bridging the gap in reaching out the masses for the banking services . It is particularly helpful for people living in rural or remote areas where traditional banking is not accessible due to distance, improper documents, or digital awareness. Using a simple and reliable biometric method empowers individuals to manage their money whenever they want. It not only makes individuals financially independent but also contributes in the overall economic growth of India.

Iris scanning is one such biometric method, which is one of the leading technologies that are ensuring that the customer's money remains protected with their unique identity. Adopting Biometric technology like Iris Scanner for Aadhaar Services highlights India's dedicated and transparent system to enable secure digital banking.

Iris is a unique, colourful muscular circle around the pupil in your eye, which regulates the amount of light that can enter in your eyes. Exactly like your fingerprint, the iris pattern of your eyes is completely unique in the world. Not even identical twins can have the same iris pattern. This makes iris scan a reliable security mechanism for AePS.

Iris scan for Aadhaar services works through a specialised camera that takes a clear picture of the iris of the user. The picture is turned into a digital code. When you visit the Aadhaar centre to carry out a bank transaction, the system runs the live scan of iris against the data of digital code stored when your Aadhaar card was issued to you. When the match is successful, your identity is confirmed, and the transaction is approved to go ahead.

Agents can use Iris Scanner by purchasing licensed devices from financial service providers like Religare Digital. It is quite straightforward to use [Iris Scanner for Aadhaar Services](#), but there are two important requirements that a customer needs to fulfill. First of all, you will need their 12-digit Aadhaar number and second is Aadhaar-Linked Bank Account. Once these points are covered, the user is ready to use Iris scan for AEPS transaction.

Iris scanning is secure, clean and contactless method that adds a protection layer to your banking transactions. The successful rollout of AePS transactions marks a new chapter in the banking sector. This robust technology not only provides solutions to the existing challenges but also takes the sector forward into the new era of security and inclusivity.
